

An aerial photograph of a coastal city, likely in a tropical region, showing a mix of modern high-rise buildings and lower-density residential areas. The foreground shows a beach with some debris and a body of water. The sky is filled with dark, heavy clouds, suggesting an approaching storm. A large blue semi-transparent rectangle is overlaid on the left side of the image, containing the title and speaker information in white text.

In the Eye of the Storm: Navigating Uncertainties in Tropical Cyclone Risk Assessment

Aims and focus of this thesis

What are crucial sources of uncertainty in global tropical cyclone risk assessments?

Specific aims:

I. Tropical cyclone model intercomparison

→ Chapter 2

Meiler et al. (2022), *Nature Communications*

II. Uncertainty & sensitivity analysis for future tropical cyclone risk

→ Chapters 3 & 4

Meiler et al. (2023a), *Comms Earth & Env*
Meiler et al. (2023b), *ICASP14*

III. Synthesis of uncertainty & sensitivity analysis across hazard models

→ Chapter 5

Meiler et al. (2024), *resubmitted*

TC model intercomparison Risk model setup

TC track sets:

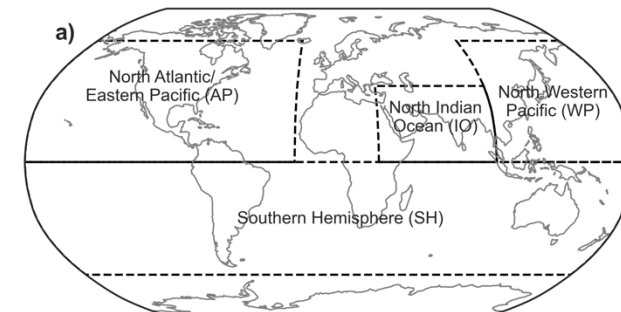

- IBTrACS¹
- Probabilistic IBTrACS²
- STORM³
- MIT⁴
- CHAZ⁵
- + wind model⁶

**direct
economic
damage**

Present-day TC impacts:

- 1980-2018
- Direct economic damage (\$)
 - Expected annual damage (EAD)
 - Return period curves

¹ Knapp et al. (2010), *BAMS*

² Gettelman et al. (2018), *Clim. Chang.*

³ Bloemendaal et al. (2020), *Sci Rep*

⁴ Emanuel et al. (2006, 2008), *BAMS*

⁵ Lee et al. (2018), *JAMES*

⁶ Holland (2008), *Mon. Weather Rev.*

Meiler et al. (2022), *Nature Communications*

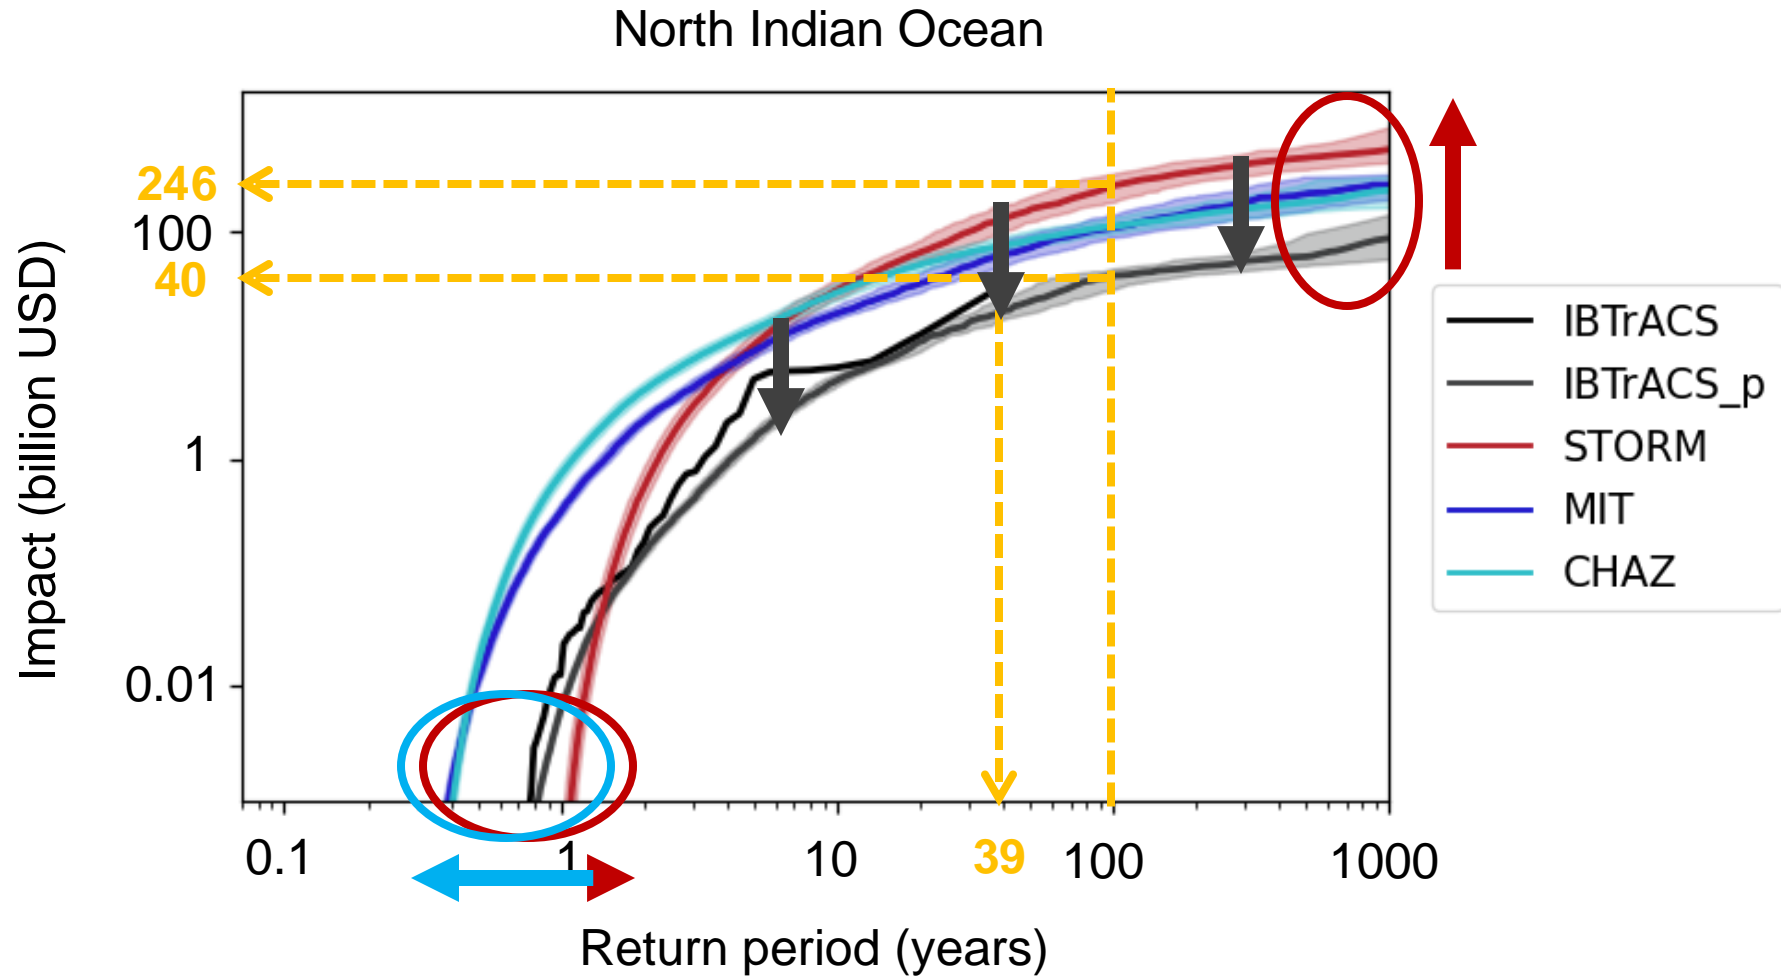

TC model intercomparison

Results: Expected annual damage (EAD)

Meiler et al. (2022), *Nature Communications*

Results: Impact return period curves

TC model intercomparison Guidance on TC track set choice

quantitative analysis × TC model qualities × application → guidance

Introduction

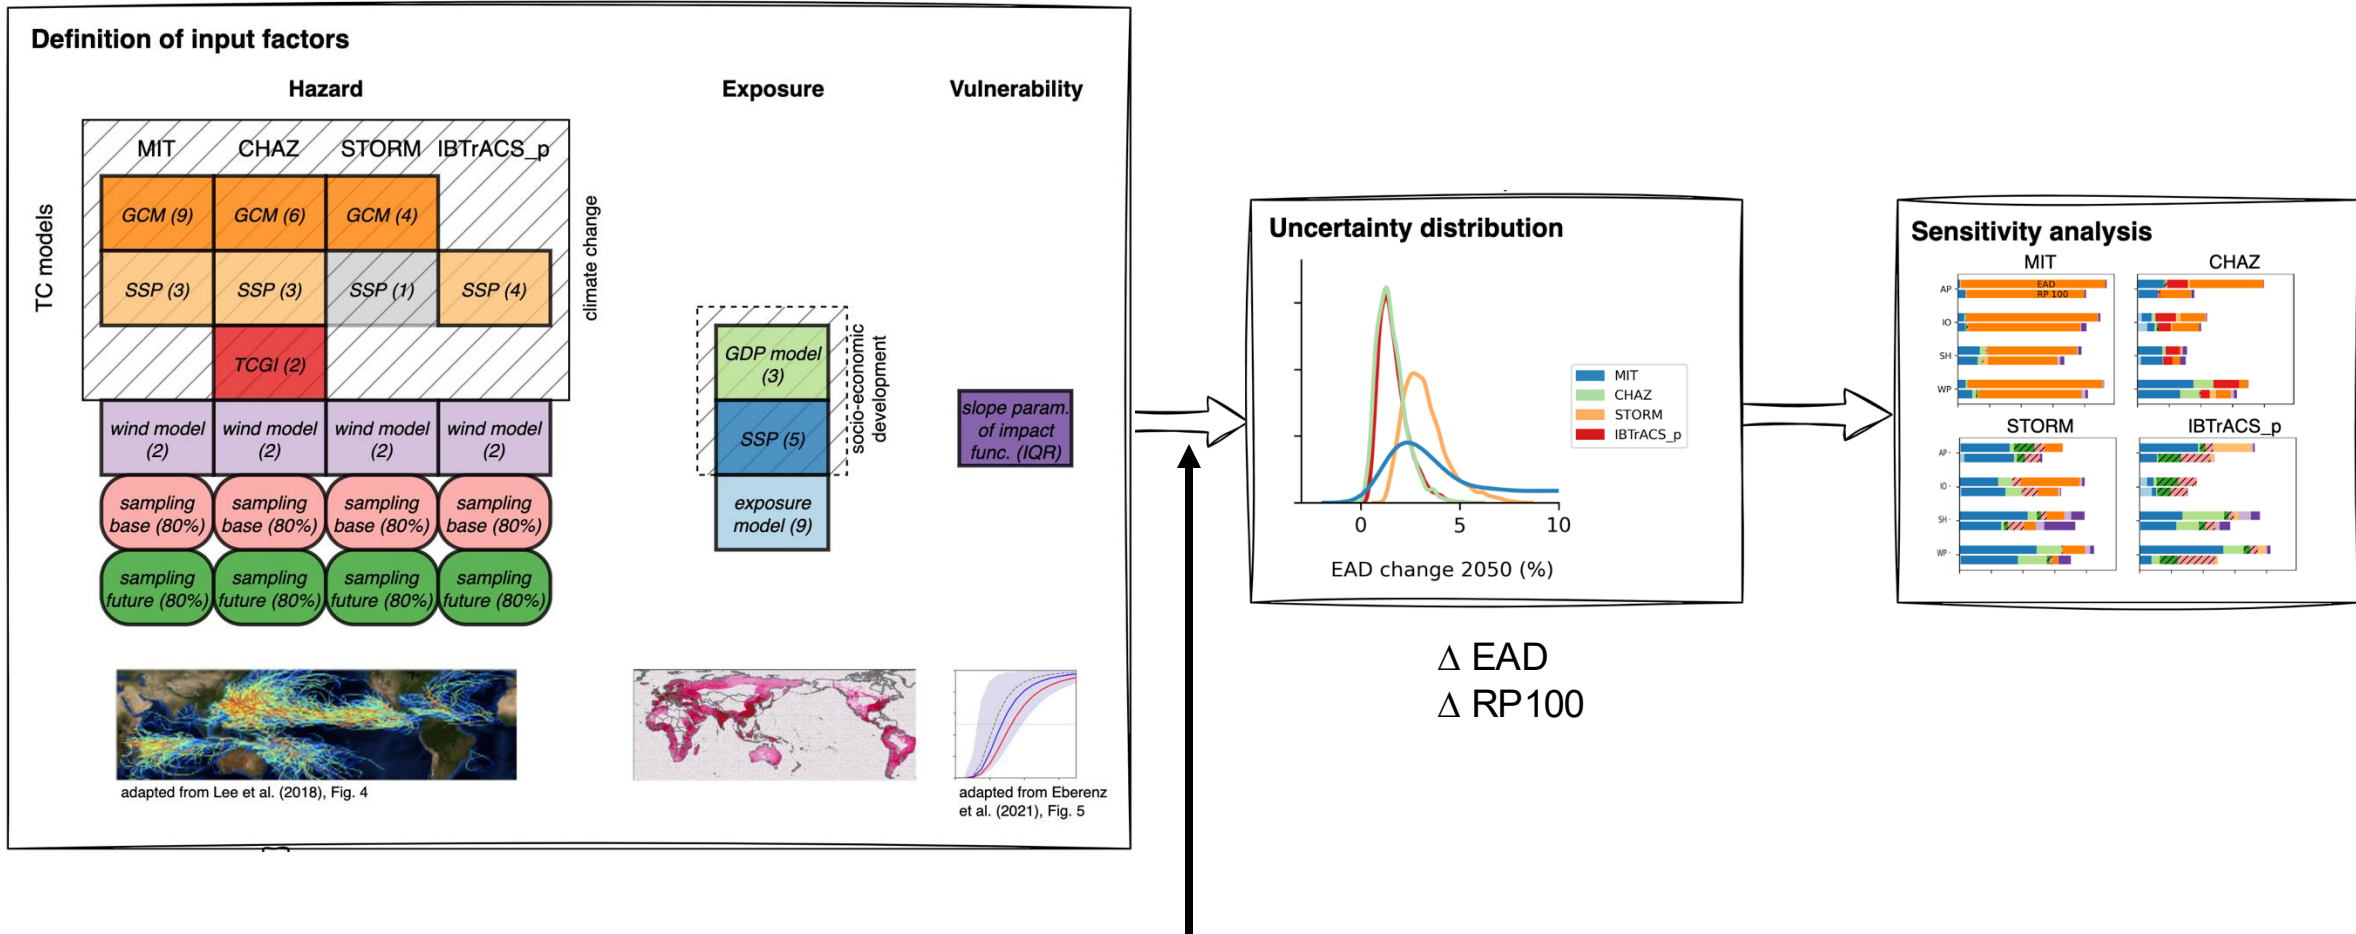

Uncertainties and sensitivities in future TC risk assessment

Meiler et al. (2023a), *Comms Earth & Env*
Meiler et al. (2023b), *ICASP14*
Meiler et al. (2024), *resubmitted*

Uncertainties and sensitivities in future TC risk assessment

Study setup

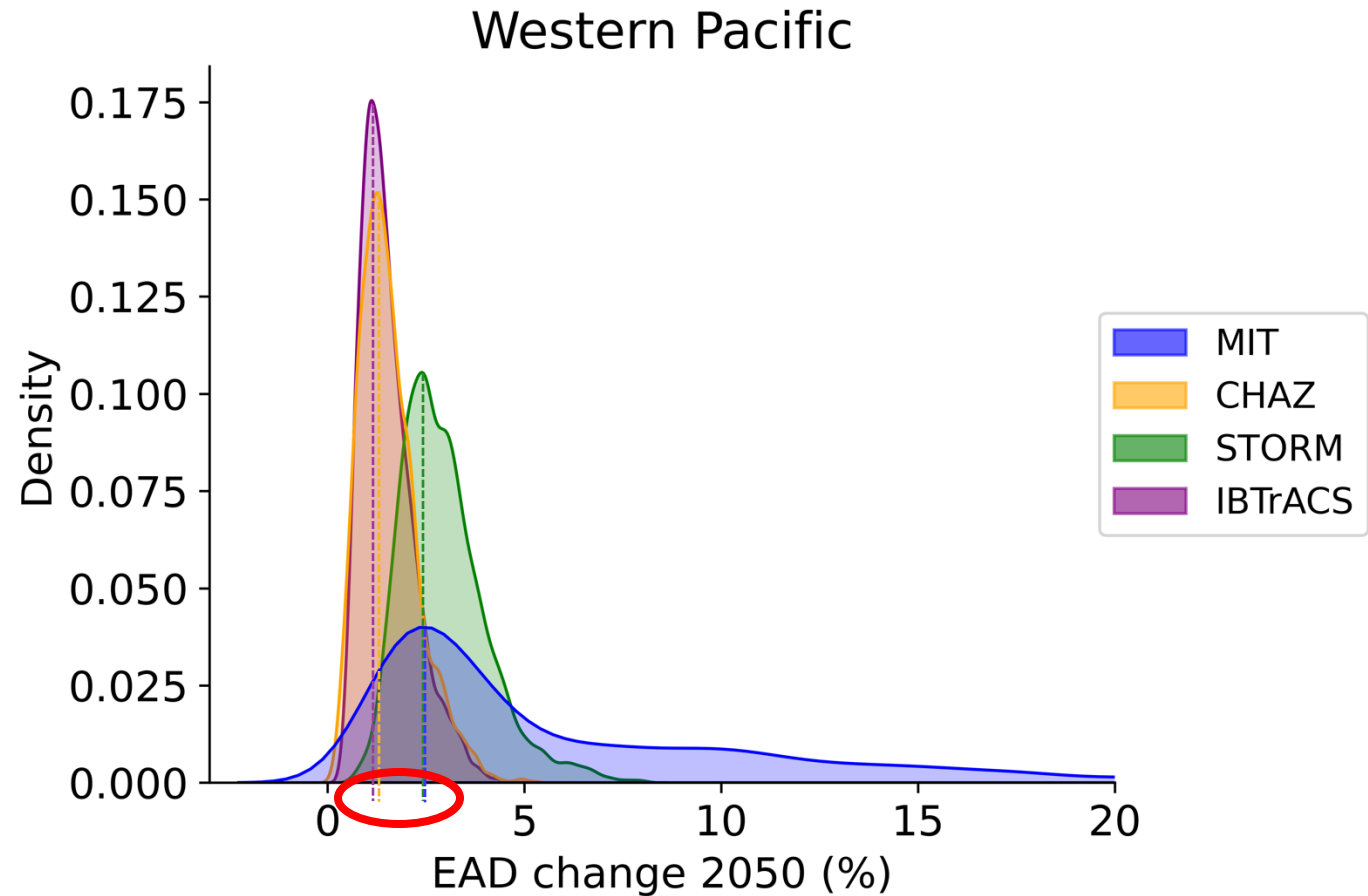

N=1024
~ 20'000 input combinations

Meiler et al. (2024), resubmitted

Uncertainties and sensitivities in future TC risk assessment

Results: Uncertainty of future TC risk change

Meiler et al. (2024), *resubmitted*

Uncertainties and sensitivities in future TC risk assessment

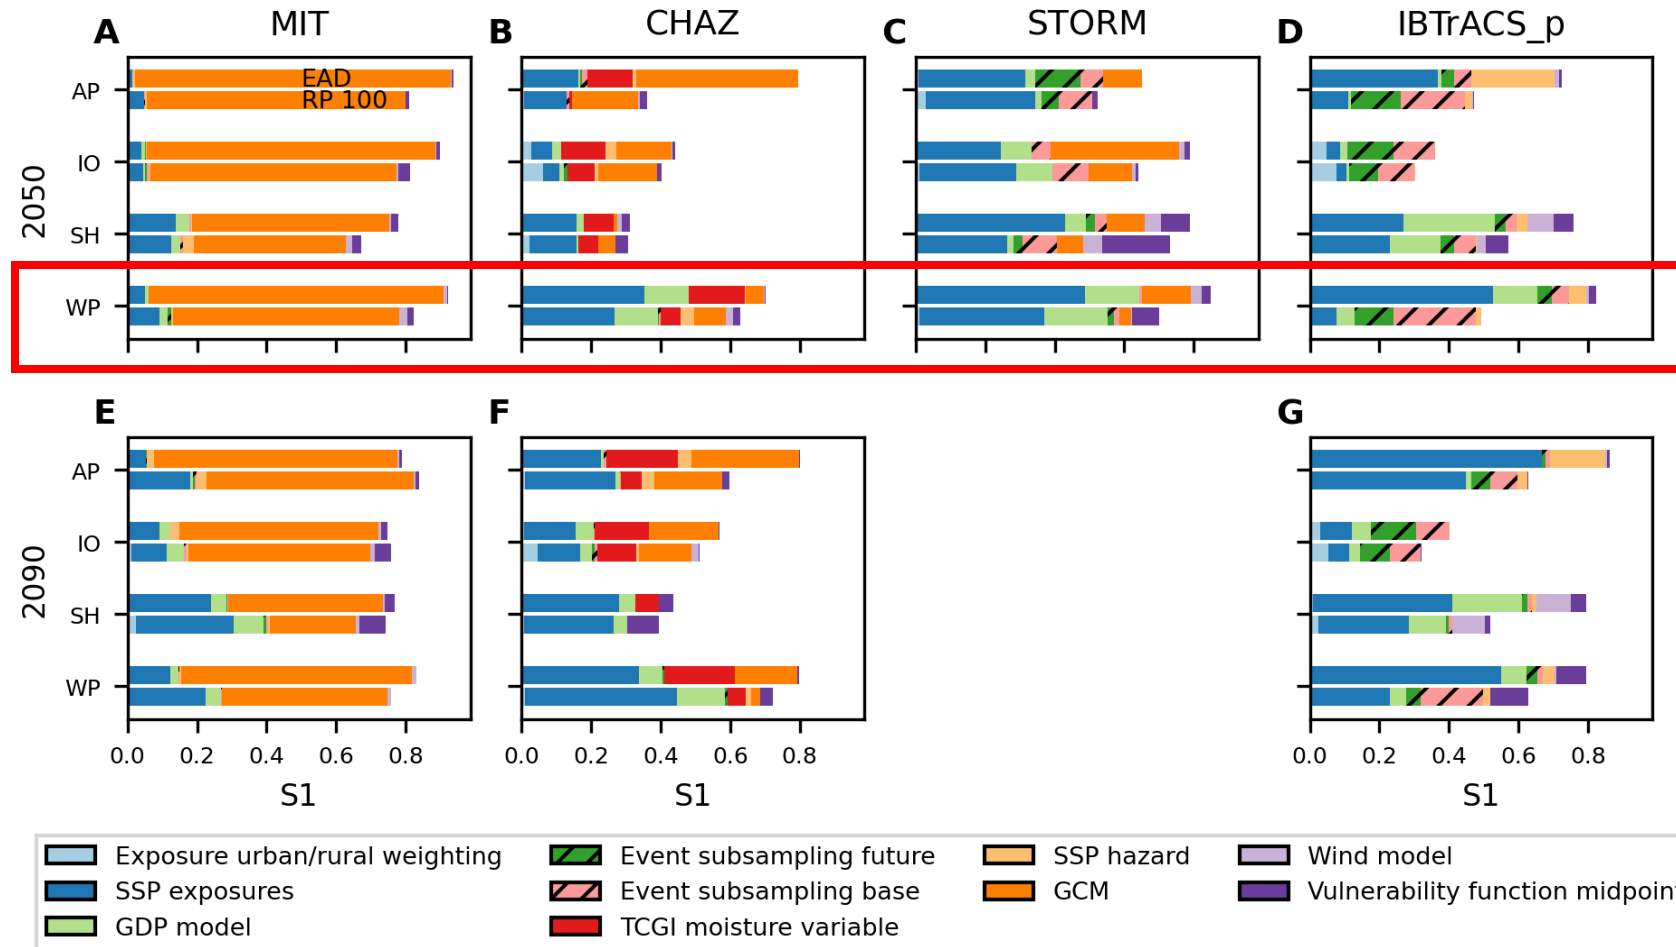

Results: Uncertainty of future TC risk change

Meiler et al. (2024), *resubmitted*

Uncertainties and sensitivities in future TC risk assessment

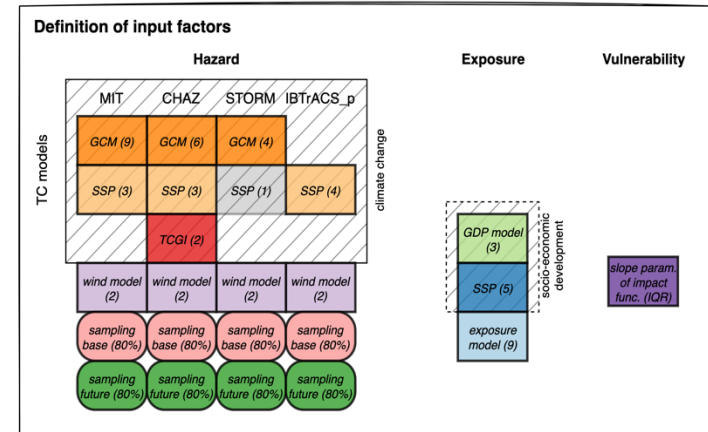

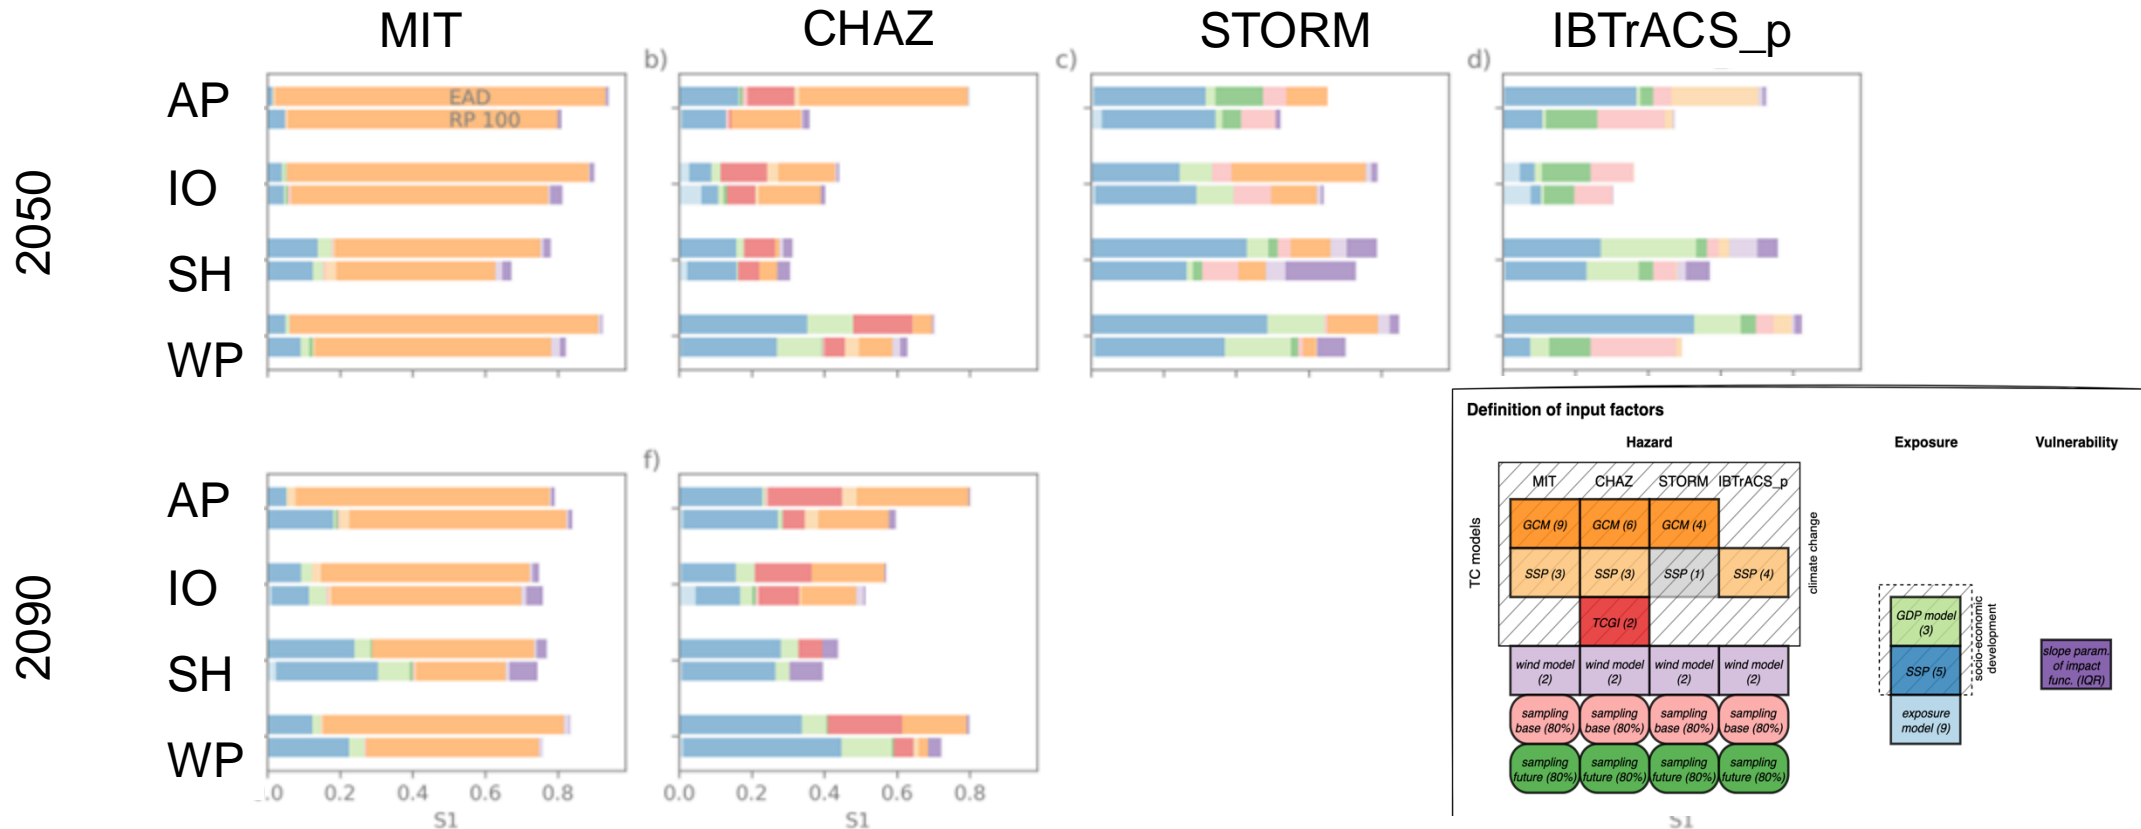

Results: Sensitivity indices

Meiler et al. (2024), *resubmitted*

Uncertainties and sensitivities in future TC risk assessment

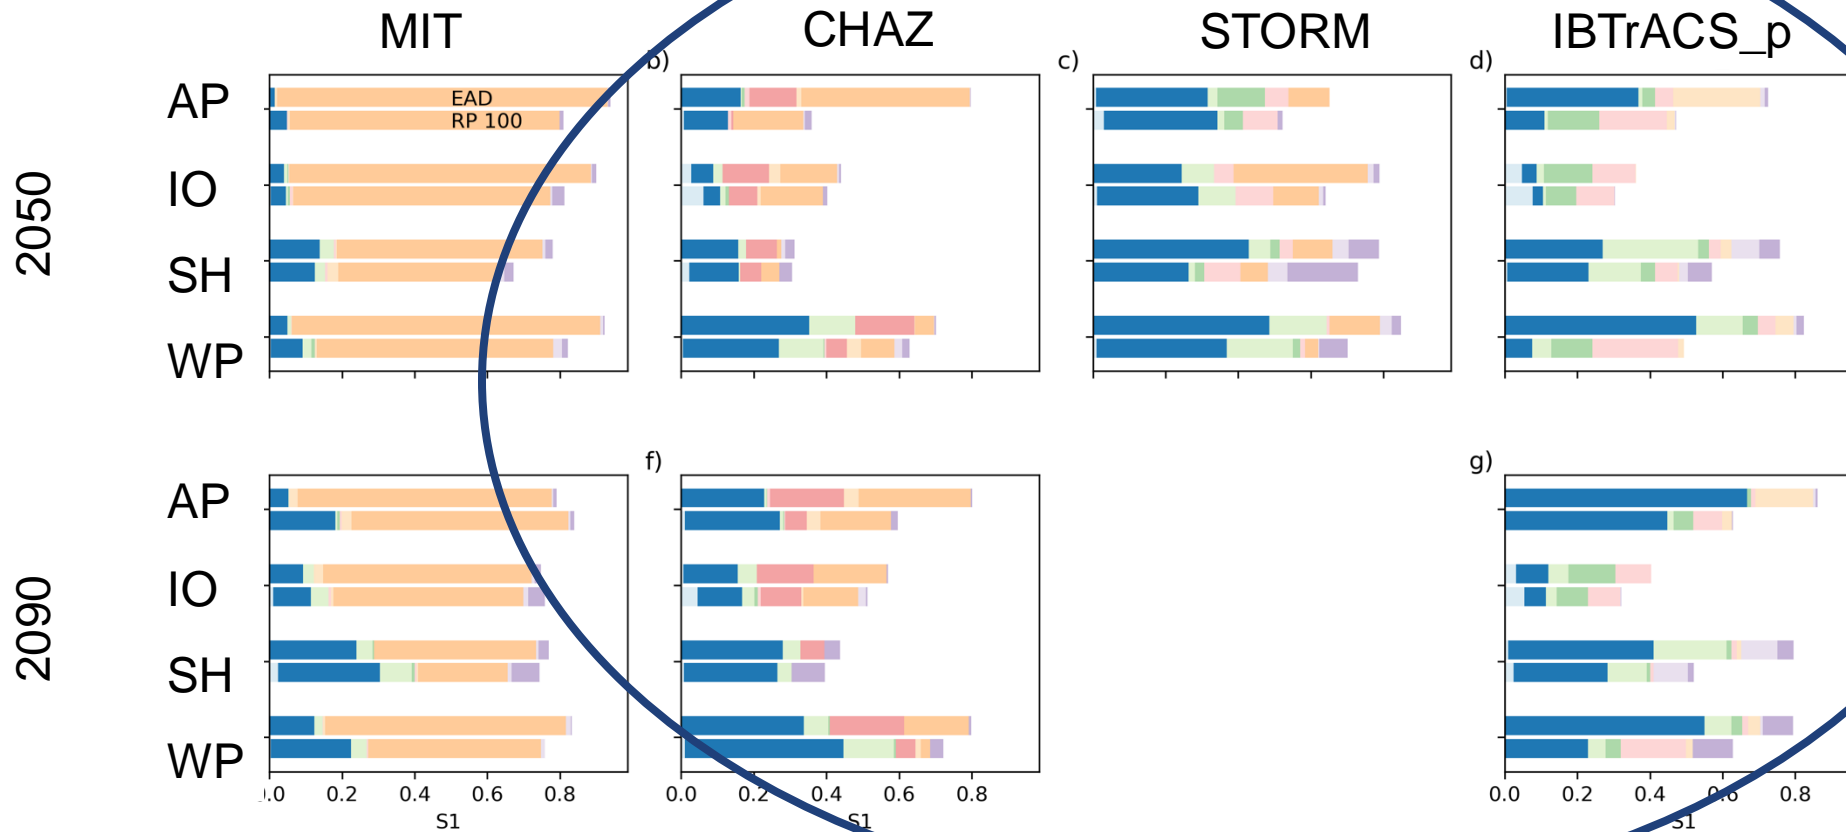

Results: Sensitivity indices

* Meiler et al. (2024), under review

Uncertainties and sensitivities in future TC risk assessment

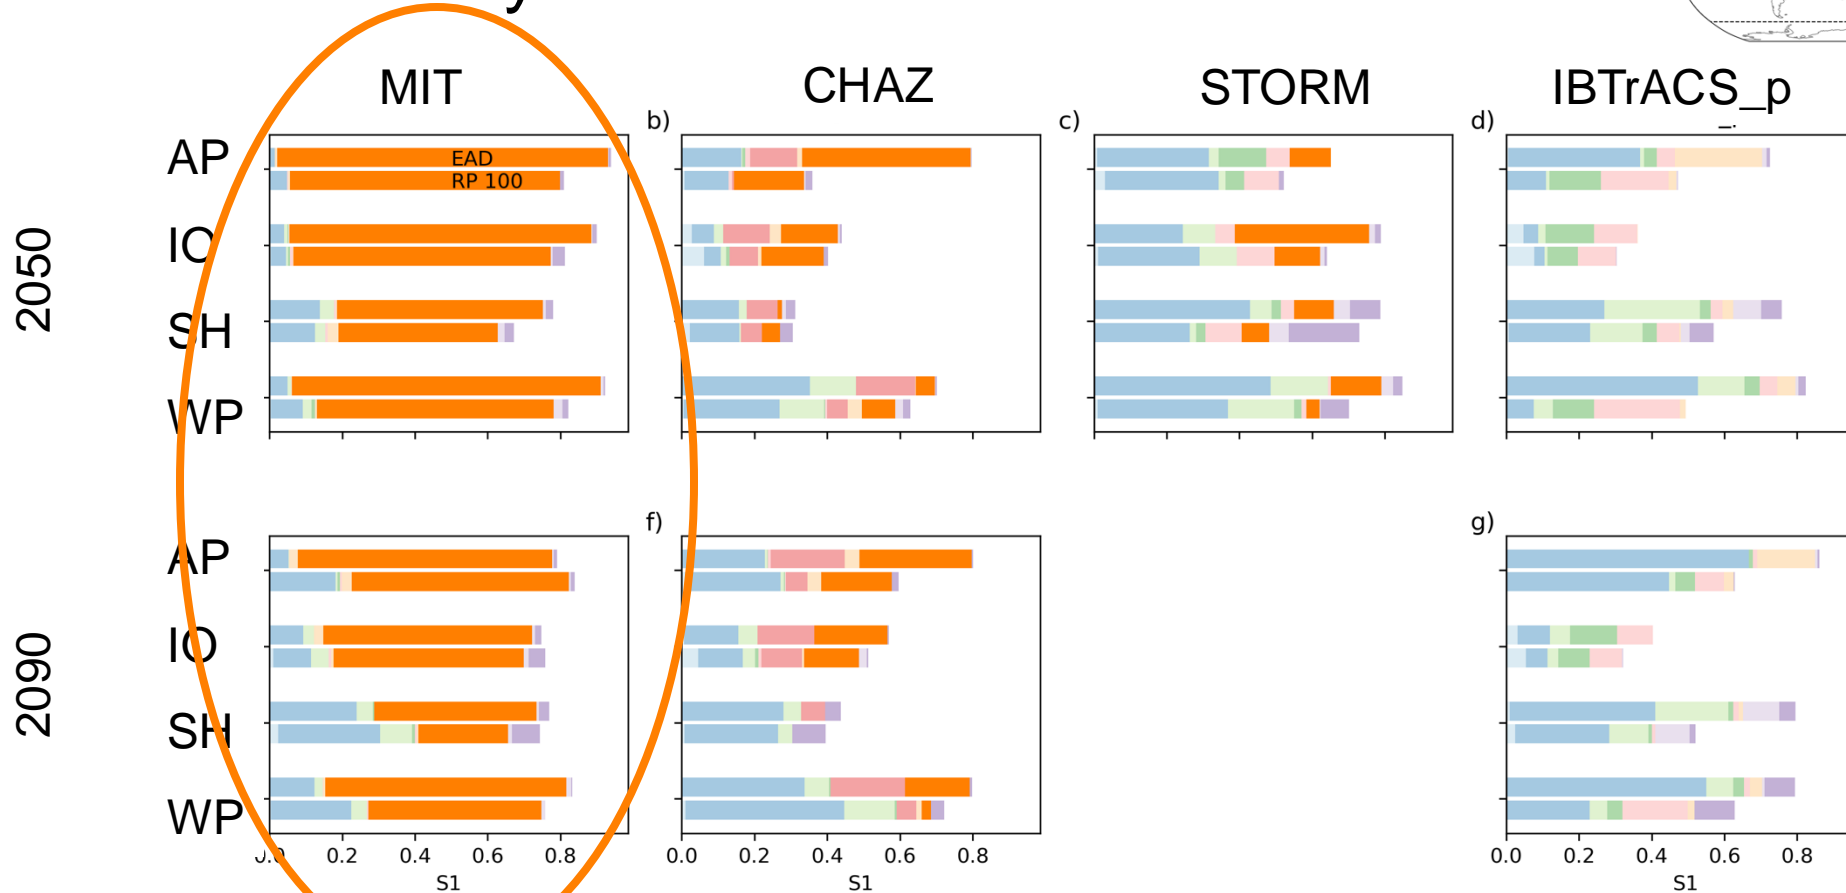

Results: Sensitivity indices

* Meiler et al. (2024), *in revision*

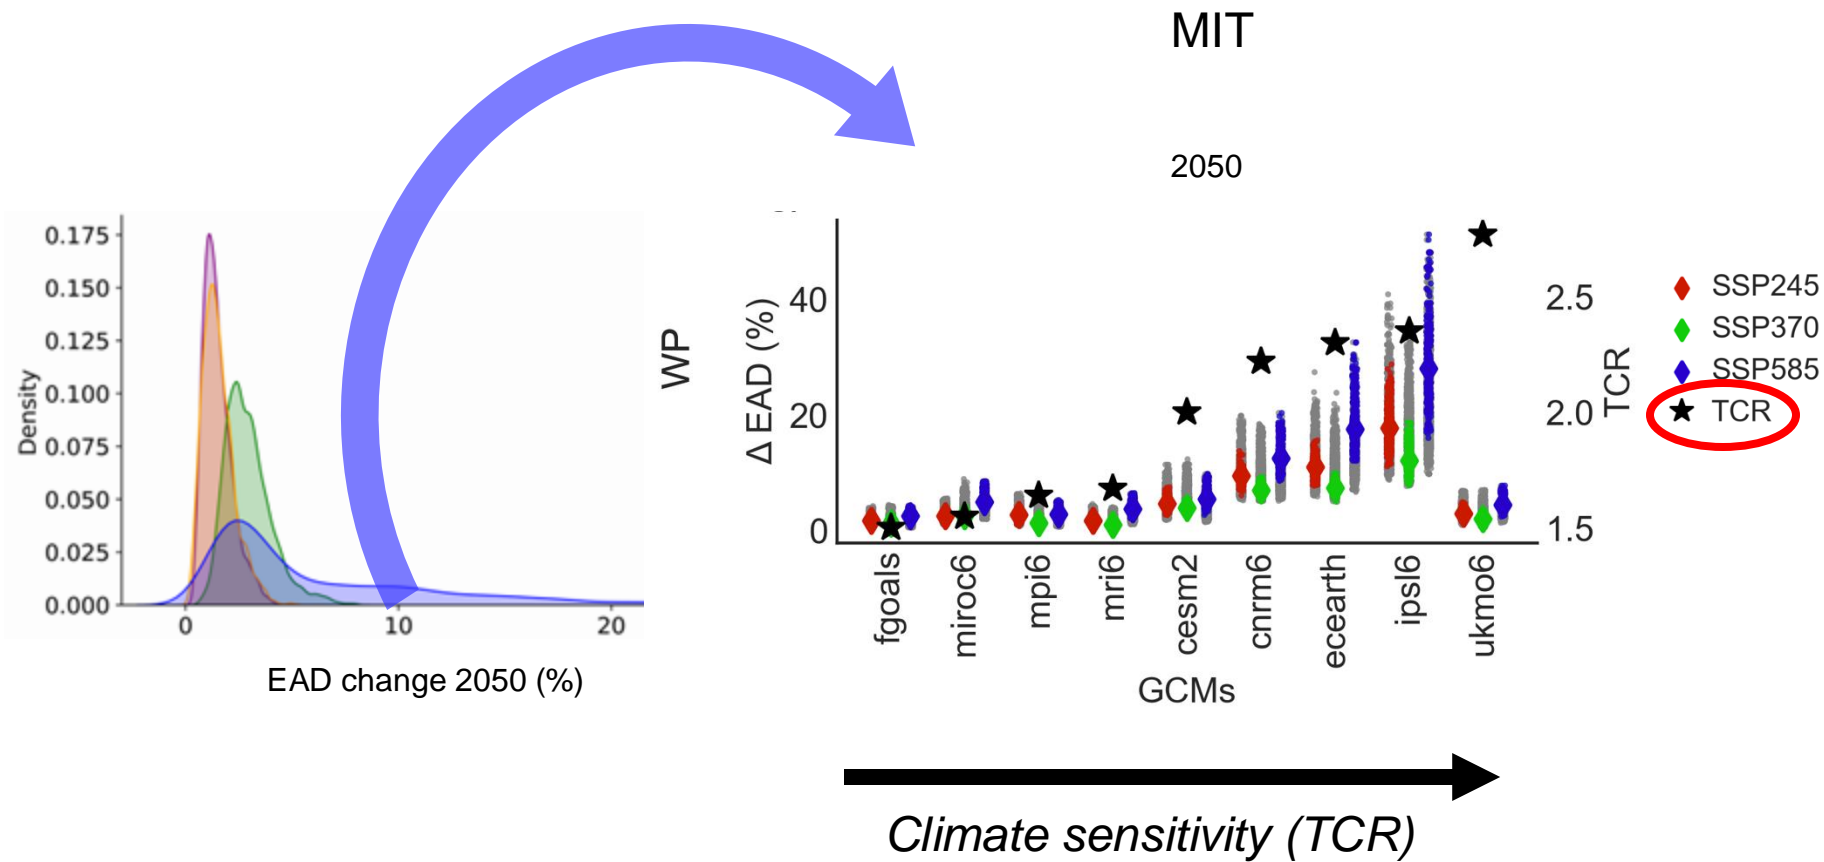

Uncertainties and sensitivities in future TC risk assessment

Results: Sensitivity indices

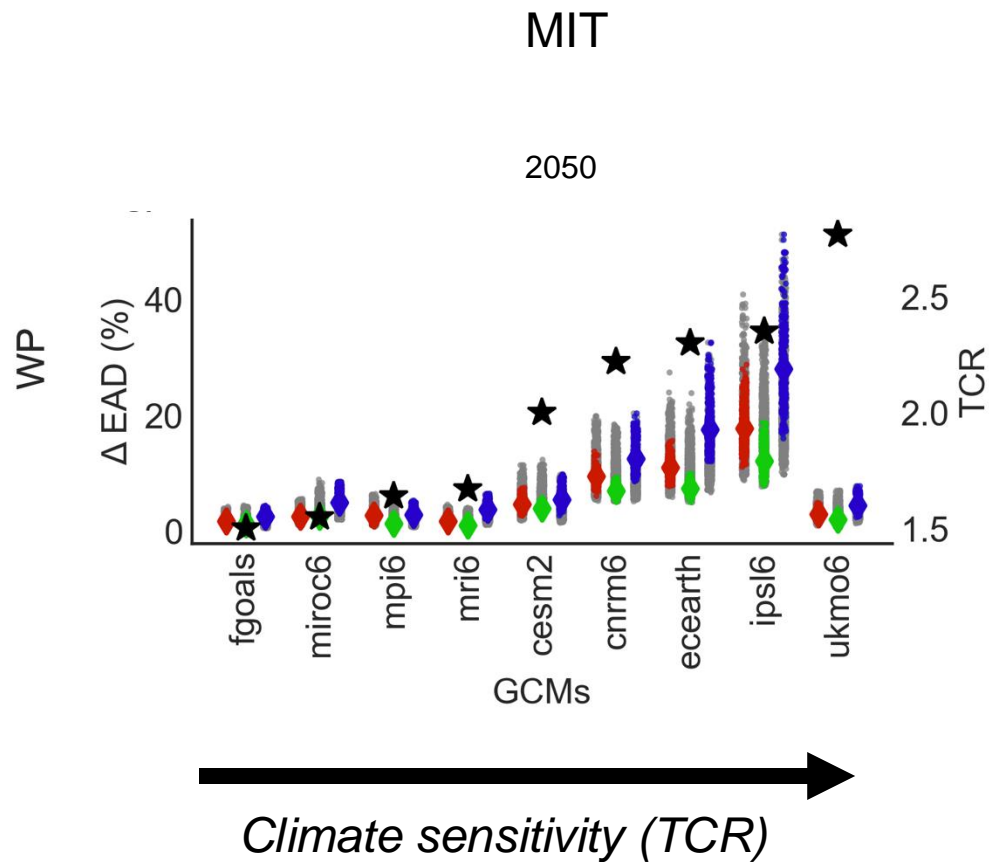

* Meiler et al. (2024), *in revision*

Uncertainties and sensitivities in future TC risk assessment Relationship to climate sensitivity in GCMs

¹⁰ Meiler et al. (2023a), *Comms Earth & Env*

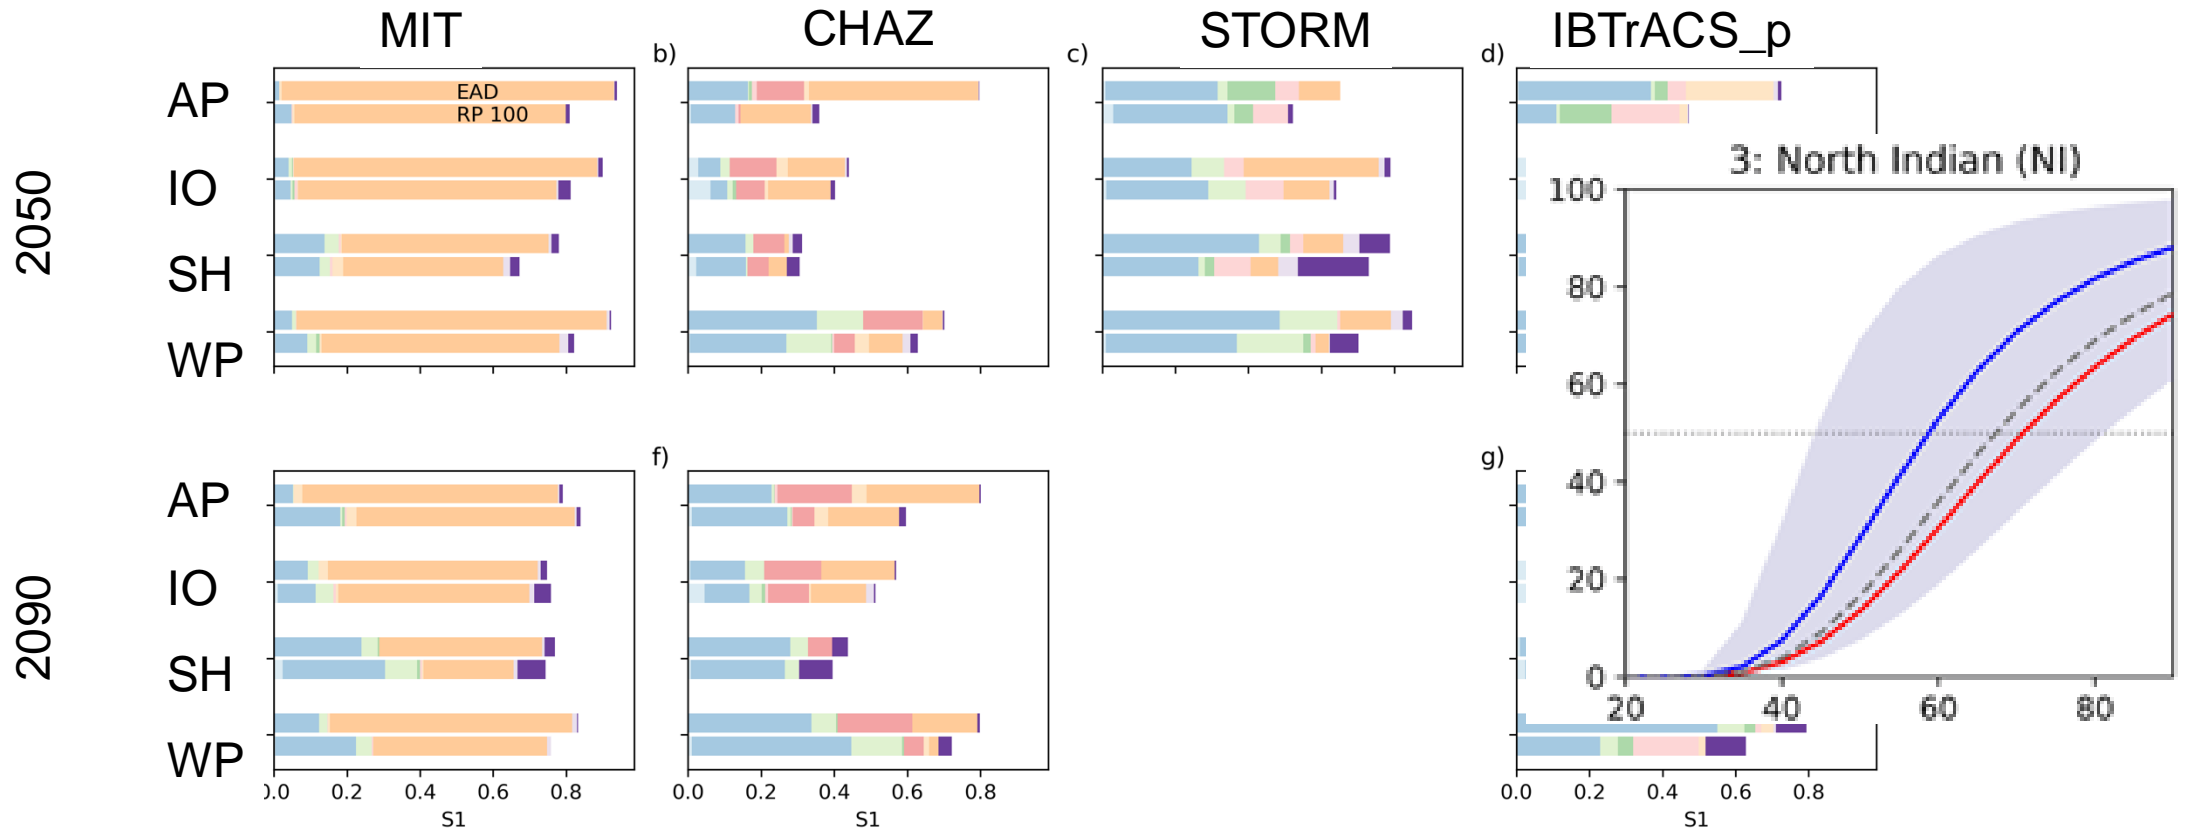

Uncertainties and sensitivities in future TC risk assessment Relationship to climate sensitivity in GCMs

¹⁰ Meiler et al. (2023a), *Comms Earth & Env*

Uncertainties and sensitivities in future TC risk assessment

Relative risk change vs. absolute risk

* Meiler et al. (2024), *in revision*

Uncertainties and sensitivities in future TC risk assessment

Relative risk change vs. absolute risk

* Meiler et al. (2024), *in revision*

Back to reality – types of uncertainty

quantitative analysis × classes of uncertainty → implications

- Aleatory (randomness)
- Epistemic (knowledge gaps)
- Normative (value-based decisions)

* Meiler et al. (2024), *in revision*

Conclusion

Unraveling unknowns in tropical cyclone risk assessment

- I. Present-day tropical cyclone model intercomparison on the impact level
→ Guidance in hazard set choice

- II. Systematic uncertainty & sensitivity analysis for future tropical cyclone risk
→ Enhanced transparency and depth of risk assessments.

- III. Synthesis of uncertainty and sensitivity analyses across multiple hazard models
→ Structured and comprehensive perspective on implications and reducibility of uncertainties.
